PROJECT PROPOSAL

Background:

I met with the founders of an AI start up who need help developing a dash board for their demand forecasting company aimed at targeting the cannabis industry.

Data Sources:

The company is using the alcohol sales from the following database (Iowa Liquor Sales) to train their ML model. It contains >15 million rows. I will be using only 2018 data (820406 rows) to create the dashboard for them.

https://data.iowa.gov/Economy/Iowa-Liquor-Sales/m3tr-qhgy

Going to use this for geojson for Iowa counties:
